Our beginnings...

Esteban Xam-mar

Mr Esteban Xam-mar, dental technician and CEO of the company , frustrated with the limitations of available solutions for badly positioned implants, designed and developed in 2004 a simple, practical product to resolve this common problem. He created the Dynamic Abutment® which allows the technician to easily correct angles up to 28º and achieve a screw-retained prosthesis even if the implants have been placed inaccurately.

Breaking away from the conventional concept of a static abutment, he created a product which gives technicians total control over the abutment's position, offering a full 360º rotation and angle correction up to 20º. Since then, further development of the Dynamic Abutment range, provides technicians the power to correct angles up to 28º.

The screw entry depends on the implant's direction; problems occur when the screw entry is in vestibular position or in any functional part of the prosthetic tooth. With our Dynamic Abutment ® it is possible to correct the screw entry up to 28º so its functionality is no longer affected nor its aesthetics compromised. This is made possible by the dynamic screw-screwdriver set which has been specially designed for this system.

All technologies used to create our angulated solutions, from the more traditional ones to the latest digital techniques, have been developed and patented by our R&D&I centre with strict adherence to our OWN ANGULATED TECHNOLOGY programme. This ensures the highest standards of production are consistently met to guarantee accuracy of fit.

Dynamic Abutment® Solutions is devoted to developing quality, innovative products in response to the needs of the dental technology sector and, in doing so, making your job easier.

DYNAMIC ABUTMENT® SOLUTIONS

RESEARCH & DEVELOPMENT

Research and innovation in prosthetics solutions are Dynamic Abutment® Solutions' hallmark and enable to keep us being the leader angled systems.
The proximity to the professionals' needs and the innovative philosophy of our brand allow our technical team to be at the cutting edge of the sector. When developing the product, we give priority to the output of our product, its ease of use and its improvement regarding aesthetic result.

QUALITY CENTER

Our Quality Center guarantees that all our products fulfill the highest quality levels just as the valid sanitary regulations.
It has the latest technologies regarding control and measuring as well as physicochemical treatments of our products. It has an ISO-8 clean room.

INTERNATIONAL CUSTOMER SERVICE

Our international customer service offers immediate answers to your queries and needs.
The international team is focused on projecting and establishing our products and comprehensive services all over the world.
Nowadays, we are present in more than 30 countries' markets.

3.0 DYNAMIC ABUTMENT®

Our unique and exclusive 3.0 Dynamic Abutment® System has stirred the implantology sector, as it achieves a screw-retained prosthesis even if the implants have been placed inaccurately and its functionality is no longer affected nor its aesthetics compromised. It is an outstanding alternative to titanium fix angled cement-to abutments and individual dies made by the technician.
Our abutments provide a perfect adjustment to avoid any modification on the prosthetic connection geometry with the implant during the prosthesis production.

Machined abutments

Cast-to Dynamic Abutment® 3.0 with Cobalt-Chrome milled base.

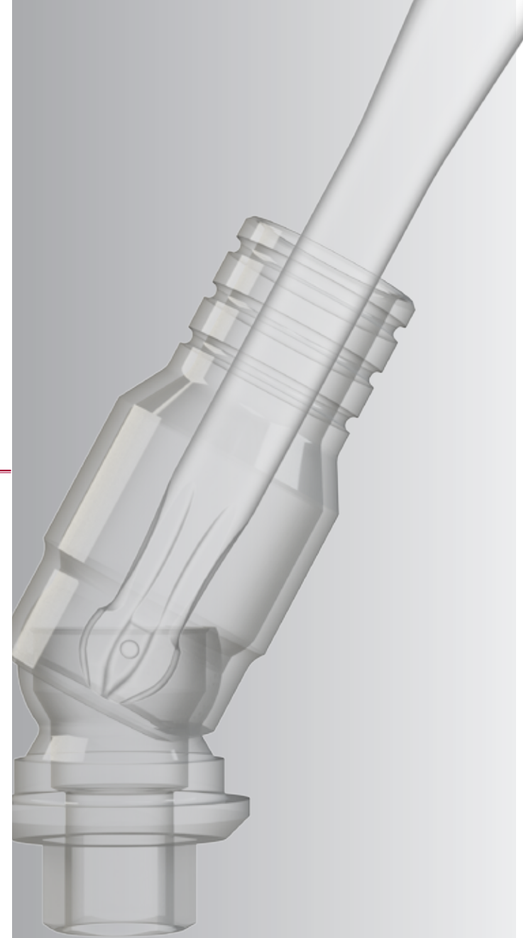
Abutment with milled Cobalt-Chrome base and castable chimney. It must be cast in Cobalt-Chrome alloy.

Castable 3.0 Dynamic Abutment®

Fully castable abutment. It is produced with sanitary plastic POM of the highest quality. It can be cast in any alloy used in the laboratory.

Cast-to Dynamic Abutment® 3.0 with Tilite® milled base

Abutment with milled Tilite® base and castable chimney. It must be cast in Tilite® alloy. Tilite® alloy is medically pure, extremely biocompatible and anti-allergic. It has a medical insurance of 2.000.000$.

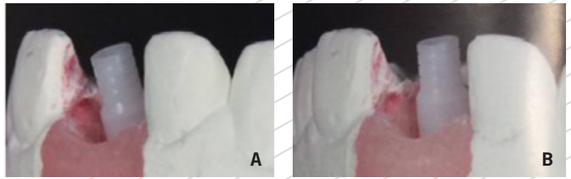


Total freedom of movement

The Dynamic Abutment® consists of two pieces connected by an elbow. The elbow connection works as a joint to offer the chimney a full 360º rotation and angle correction up to 28º.

Our Dynamic Abutment® is a revolutionary solution as it gives technicians total freedom of movement and, at the same time, allows angle correction. It simplifies the prosthetic work and, what's more important, provides solutions.

Example of use



Dynamic Abutment® in a model.
Image A: with no angle correction.
Image B: with angle correction. The screw entry is now in a palatar position.
Article published in "The Journal of prosthetic dentristy" (June 2015).
By: Eva Berroeta

DYNAMIC SYSTEM FOR MILLING STRUCTURES

The Screwdriver set of 3.0 Dynamic Abutment® System is used in those cases in which rectification of the entry of the screw due to an unfavorable position of the implants is necessary, improving the functionality and aesthetics of the milled prosthesis.

Dynamic Screwdriver

Screwdriver with hexalobular head, exclusively to the 3.0 Dynamic Abutment® system; lengths: 18, 24, 32mm.
Our screwdriver has a contra-angle connection to make it easier to use with a dynamometer or manual ratchet, with the corresponding adaptors or handles.

Dynamic Screws

They cover all the tread metrics available on the market. They are used with the 3.0 Dynamic Abutment®, the 3.0 Dynamic TiBase® or milled structures with an angled screw channel of up to 30º. There are several lengths for each metric to ease adaptation to the structures. All of them are made of grade 5 titanium

All screws are perfectly identified with their batch and reference numbers, which allow each and every screw to be traced and recorded in the patient's card and in the clinical or laboratory records. Only the 3.0 dynamic screwdriver must be used to install them.

SECURITY & TRACEABILITY

Dynamic Abutment® Solutions manufactures the "3.0 Dynamic System" range of products, which include the Dynamic Abutment®, the dynamic screw and screwdriver and the Dynamic TiBase®. These are all exclusive and **patented products.** All of them are manufactured under very strict quality guidelines.

With the 3.0 Dynamic System, we provide a card for the patient and labels for the laboratory and the clinic to identify the position in which our system is located.
It is extremely important that this information is registered on the patient's record for future repositioning and to know it is necessary to use the screwdriver or the Dynamic System to insert or remove the prosthesis and avoid possible future problems.
We exercise complete control over the traceability of our products to fulfil the current health legislation. This helps repositioning the material and inform about the importance of using the appropriate tools when handling the Dynamic System components.

Card for the patient

Identifying labels

Exclusivity

All of our products are marked during the manufacturing process to ensure the exclusivity of each piece and control traceability.

This logo is exclusive to Dynamic Abutment® Solutions and guarantees the products are original and have successfully achieved the highest quality standards in our Quality Center.

DYNAMIC SCREWDRIVER

Screwdriver with hexalobular head, exclusively to the 3.0 Dynamic Abutment® system; lengths: 18, 24, 32mm. Our screwdriver has a contra-angle connection to make it easier to use with a dynamometer or manual ratchet, with the corresponding adaptors or handles.

HEXALOBULAR 1.70 mm
DSPDCLH-18: PD 18mm

HEXALOBULAR 1.70 mm
DSPDCLH-24: PD 24mm

HEXALOBULAR 1.70 mm
DSPDCLH-32: PD 32mm

DYNAMIC SCREWS

They cover all the tread metrics available on the market. They are used with the 3.0 Dynamic Abutment®, the 3.0 Dynamic TiBase® or milled structures with an angled screw channel of up to 30º. There are several lengths for each metric to ease adaptation to the structures. All of them are made of grade 5 titanium

All screws are perfectly identified with their batch and reference numbers, which allow each and every screw to be traced and recorded in the patient's card and in the clinical or laboratory records. Only the 3.0 dynamic screwdriver must be used to install them.

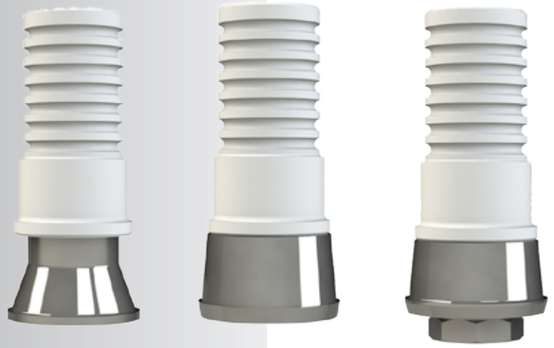
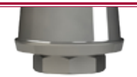
STRAIGHT ABUTMENTS



STRAIGHT ABUTMENTS

Straight abutment to make screw-retained prosthesis on implants.This abutment is used when no angle correction is needed. With milled Tilite® base and castable chimney. It must be cast in Tilite® alloy. Compatible with a wide range of implants on the market. They are used to elaborate dental crowns and bridges.

Machined



Tilite®

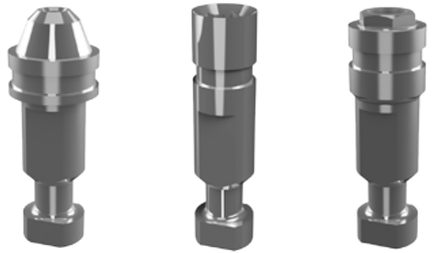
ANALOGS

Stainless steel implant analog. It reproduces the implant connection



COMPLEMENTS

Manual handle

Made of stainless steel.
They are used to connect screwdriver bits with the contra-angle connection

Large manual handle for laboratory Ref. MNLB

Ideal to manipulate models in the laboratory.
Length 55.65mm.

Manual handle for clinic

Ref. MNCL80
Clinic handle: used to position the prosthesis in the mouth prior to torque control in the clinic. Length: 15.65mm.

Universal manual torque wrench prosthetic

Ref. CCUNI

Torque wrench.
4mm square connection. Torque 10-35N.c

Manual torque wrench adapter prosthetic

Piece to connect the screwdriver with contra-angle connection to the torque wrench.

Universal Manual torque wrench adapter
Ref. MNADPCA
4mm Square connection

Straumann Manual torque wrench adapter
Ref. SPACC-STR
Straumann connection

PROSTHETIC REAMER

The casting process of the castable cylinders generates imperfections in the final metallic structure.
In order to minimize the consequences generated by this process, we have designed a line of tools to correct the base of the cylinder, improving the interior of the chimneys and the adjustment to the implant.

TALLADIUM GUARANTEE

TERMS AND CONDITIONS
These guarantee terms and conditions ("T&C") cover the entire range of Talladium products ("Products"), manufactured by TALLADIUM ESPAÑA S.L. and distributed by Geoda Medical S.L. or official dealers. The guarantee described in these T&C is exclusively in benefit of the clinician ("Clinician") and of the dental technician ("Technician") and not for the benefit of third parties or institutions, including patients.

GUARANTEE PERIOD
TALLADIUM ESPAÑA S.L. offers a lifelong guarantee for its entire range of products starting from the date of issue of the invoice.

GUARANTEE SCOPE
Subject to the limitations and exceptions described in these T&C, TALLADIUM ESPAÑA S.L. will offer the following benefits:

QUALITY: If there are defects in the materials or in the manufacturing of the Product, TALLADIUM ESPAÑA S.L. will replace the Product with no additional cost.

SAFETY: If, having complied with all the product indications, the prosthesis should have to be made again, due to a fault in the Dynamic Abutment® or Dynamic Titanium Base® system, TALLADIUM ESPAÑA S.L. will replace the abutments and screws necessary to remake the prosthesis, as well as the costs derived from its manufacturing.

In case of having used our products and having complied with all the product indications, the implants suffer any damage, TALLADIUM ESPAÑA S.L. will pay the cost of the implants. This coverage will only be valid during the first 6 months after the collocation of the prosthesis which includes our products.

CLAIM REQUIREMENTS AND PROCEDURE
To receive the benefits indicated in these T&C, the treating Clinician must satisfy the following requirements:
a) The claim must be notified to TALLADIUM ESPAÑA S.L. within (30) days since the date the claimed defect was detected.
b) This requires that the Clinician or Technician must contact the customer service department by telephone or by e-mail to make the claim.
c) A claim form will be completed, which, together with a document or report which justifies the faulty Product and the faulty Product itself, will be sent by the customer to TALLADIUM ESPAÑA S.L. offices, within the previously indicated period.
d) Clinicians or Technicians presenting a claim in agreement with these T&C must be up to date in any payments owing to TALLADIUM ESPAÑA S.L. or to any of its subsidiaries, at the time when the claim form is presented.
e) All the use procedures of our Products must be carried out in agreement with the instructions of TALLADIUM ESPAÑA S.L. as well as in accordance with commonly accepted dentistry practices.
f) The expenses derived from this procedure will be assumed by the customer. The return shipping costs will be assumed by TALLADIUM ESPAÑA S.L. in all those cases covered by these T&C.

Regardless of the guarantee rights, claims should be notified as soon as possible in order to comply with regulatory requirements.

GENERAL LIMITATIONS OF THIS GUARANTEE
With the exception of the guarantee described in these T&C, neither TALLADIUM ESPAÑA S.L. nor its representatives, nor third parties manufacturing or distributing the Products, represent or offer a guarantee, agreement or any other express or implicit, oral or written, commitment, with respect to the Products (without limitation), including guarantees involved in the marketing, durability or suitability for individual uses or purposes.

In addition and within the maximum extent permitted by the relative law, TALLADIUM ESPAÑA S.L. rejects (on its own behalf, and on behalf of its representatives and third parties that manufacture or distribute Products) any responsibility with respect to any direct or indirect damage caused, which may result from or be a consequence of the design, composition of the dental prosthesis into which the Products are integrated.

GUARANTEE EXCLUSIONS
TALLADIUM ESPAÑA S.L. limits this guarantee to:
- Transformed abutments that form part of the dental prosthesis. But not the screws used to anchor them.
- Problems derived from the use of laboratory screws for the definite fixation of the prosthesis. TALLADIUM ESPAÑA S.L. has clinical screws that satisfy that function.
- Clinical screws that have been in the mouth for more than 2 years, as it is understood that the patient has to have annual check-ups with the subsequent change of screws.
- The fault is due to normal wear and tear.

AMENDMENT OR SUSPENSION OF THE GUARANTEE
TALLADIUM ESPAÑA S.L. reserves the right to amend or withdraw these T&C at any time and without prior notification. Any modification or suspension shall not affect products already placed in patients.
