DYNAMIC ABUTMENT® SOLUTIONS

More than 12 years have passed since we started to develop products to make your work easier. We have grown day by day thanks to our customers, distributors and collaborators. We are continuously evolving and developing new products. The dental sector is changing very fast and we consider very important to be informed of the latest developments, news and the most relevant information. 2017 has been a fantastic year for us and it has been a great pleasure sharing it with you. 2018 is full of developments, surprises and new events. Thus, we would like to share with you the most important news from the last month.

NEW COMPATIBILITIES OF THE 3.0 DYNAMIC TIBASE

We keep developing new compatibilities for our 3.0 Dynamic® TiBase.

More than 280 compatibilities are available. You can find them in our extraoral Cad-Cam Solutions catalogue. Please ask for your catalogue or download it on our webpage.

The new compatibilities developed are: Astra Evolution 4.8, Astra Yellow (X-Narrow), Bego Semados/S

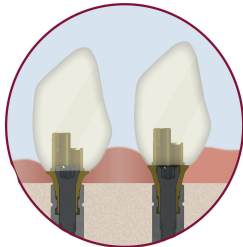

INTRAORAL SCANBODY SYSTEM: maximum precision

In the last edition of the IDS2017 in Köln (Germany) we presented our new Intraoral Scanbody System, developed by Dynamic Abutment® Solutions.

It is an intraoral system of high precision to be used in intraoral or extraoral scanning processes, that moreover, includes the option of working with angulation.

The system has had a strong entry in the market and the results obtained have been extraordinary.

DYNAMIC® TIBASE : new gingival heights

Now available with different gingival heights to solve those cases when the gingival margins are at different levels. Ask for the new compatibilities available: das@dynamicabutment.com

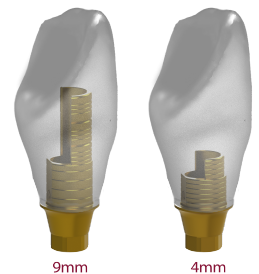

Ask for the new compatibilities available: das@dynamicabutment.com

WORK WITH MORE SECURITY: 3TiBASE®

Another novelty presented during the IDS 2017 was a product that turned to be a commercial success.

The Dynamic 3TiBase®, offers the possibility of working with different cement heights: 5,7 or 9mm. They have been specially designed for those cases who need more cement height. Thanks to this new product, it is possible to obtain more supporting area for the structure and, at the same time, it provides more resistance and avoids the structure from breaking due to a decompensation between the TiBase and the structure.

DASEVENTS

DAS IN AEEDC DUBAI

Our products were an overwhelming success in Dubai. Last week we attended the AEEDC Dubai during 6th to 8th of February.

We wanted to show you our new products we

have developed with our own angled technology.

DAS TRAINING IN SERBIA

Dynamic Abutment® Solutions gave a Training Course in the facilities of our dealer in Serbia: MIKOENTAL.

All attendees discovered the advantages of using our products and they had the chance to resolve their doubts and exchange views with other professionals.
