

# DYNAMIC ABUTMENT® SOLUTIONS: Traceability

Dynamic Abutment® Solutions is the world leader in developing angulated solutions for the dental sector. We know that the key to our success lies in developing quality, innovative products that provides added value to your business.

## Production

More than 10 years ago, the company was founded. Since then, we have been working to guarantee our product's traceability. Thanks to the establishment of measures, actions and procedures, we can register and identify every single product from its origin to its final destination. During the manufacturing process, we evaluate the raw materials our suppliers use to make our products and we make sure that all these materials are biocompatible, tested and certified.

Product manufactured by Dynamic Abutment® Solutions. Identification label in the product's package

## Quality Certificates

Our presence in many international markets means we have the mandatory health certifications. These certifications, apart from protecting our product, guarantees that each and every product meets the health regulations, which is one of our most important commitments.

## Patient's card

With the 3.0 Dynamic System, we provide a card for the patient and labels for the laboratory and the clinic to guarantee the product's traceability, from the moment our customers receive our product since it is placed on the patient's. Thanks to the patient's card, we are able to identify the position in which our system is located. It is extremely important that this information is registered on the patient's record for future repositioning and to know it is necessary to use the screwdriver or the Dynamic System to insert or remove the prosthesis and avoid possible future problems.

We exercise complete control over the traceability of our products to fulfil the current health legislation. This also helps repositioning the material and inform about the importance of using the appropriate tools when handling the Dynamic System components.
