

# Technology behind Beauty

WHEN TECHNOLOGY IS AT THE SERVICE OF BEAUTY, INCREDIBLE THINGS HAPPEN

Dynamic Abutment® Solutions, specialized in angulation, 14 years in investigation and development of angulated solutions.

Nowadays it is the only COMPLETE SYSTEM on the market that improves the aesthetics and functionality of the prostheses.

We have a wide portfolio of products developed as part of a complete system for Cad-Cam. It also includes all the necessary digital resources to solve the complexity of angulation in Cad-Cam.

Our products are compatible with more than 300 implant compatibilities

Dynamic µScanbody is the most accurate scanbody on the market and it is the technological contribution in the process of digitalization at the clinics.

It is used for intraoral scanning, allowing different design options in angulated works: angulation direct to implant, angulation with Dynamic Tibase®, 3Tibase® and Tibase® with different gingival heights.

We also have digital analogs for the 3D models production and the exclusive screw/screwdriver system that allows angle corrections up to 30°.

## Have a wonderful convention
